

Ethics in Artificial Intel -

: Regular and timely attendance is required. Material will be covered in class that is not covered in the readings.

All students must make an oral presentation and submit a ten-page paper rigorously addressing an ethical question associated with AI based technology. When choosing a dilemma to address, it should have two reasonable sides and some level of tension; or result in different conclusions depending on moral approaches applied. You may suggest a resolution or simply present arguments in favor of multiple solutions. In either case, all arguments must be well supported. The paper should include a brief literature review and may include practical recommendations. It should incorporate both secular and Torah sources. You also must make an oral presentation to the class. This will be comprised of two parts: (1) A six-minute video presentation (it may be NO MORE than six minutes) and should focus on the key points of your findings, and (2) your ability to answer questions from your classmates and professors.

- Oct 25th - Proposal. Submit a proposal for a topic. You may do this prior to this date insofar as we are going to try to avoid overlap with class and other presentations on a first come first served basis.
- Nov 8th: Presentation of initial findings. You must schedule a meeting to discuss direction and initial findings with one of the instructors.
- Dec 1st: You have an option of submitting a rough draft and getting feedback from one of the instructors in advance of their presentation (recommended but not mandatory).
- December 20 and 22: Presentations.
- Dec 28th: Paper due. Your paper should address issues raised by fellow students and faculty
